

Our brands

Abbkine Scientific

Abbkine Scientific Co., Ltd. aim to provide innovative, high quality assay kits, recombinant proteins, antibodies and other research tools to accelerate life science fundamental research and drug discovery. Abbkine cancer specific monoclonal antibodies are specially designed for Immunohistochemistry (IHC) on human tumour cells. Their broad range of ELISA kits is validated on a large variety of species (including bovine, ovine, canine, porcine...). tebu-bio distribute Abbkine products all over Europe.

Abnova

Abnova takes a genomic / proteomic approach for the development of antibodies in Life Sciences Research (Innovate through Integrated Solutions). Their goal is to have at least one primary antibody to every human expressed gene in the human genome. Abnova's comprehensive offer of monoclonal and polyclonal antibodies together with recombinant proteins (to be used as controls for immuno-assays) and ELISA kits are available in Europe via tebu-bio. It includes also the collection of Rabbit polyclonal MaxPab® antibodies generated from full-length proteins (instead of peptide antigens for immunization) to recognize both linear and conformational protein epitopes for classical applications (WB, IF, IHC, IP, FC). European key words: Antikörper, Antibodies, Anticorpi, Anticuerpos, Anticorps, Antistoffer, Antilichamen, Anticorpos...

ABP BIOSCIENCES

ABP Biosciences develops and manufactures life science reagents focusing on fluorescence-based detection. The company has developed several unique products, such as Andy Fluor dyes, iQuant™ DNA or RNA Assay Kits, Phospho-Tag™ Phosphoprotein Gel Stain, and ultra-sensitive ECL Western Blot Reagent, cell functional assays (Apoptosis, Viability, Proliferation), cell structure probes as well as transfection reagents.

AIM Biotech

AIM Biotech provide Life Scientists with a modular microfluidic-based solutions (e.g. gas permeable chips, hydrogels...) to co-culture different cell types in discrete 3D and 2D compartments. AIM Chips enable the use of chemical gradients and flows (both interstitial & shear) to tune the culture microenvironment and thus obtain more biologically relevant experimental data. Web site: www.aimbiotech.com

Alfa Aesar

Alfa Aesar, a Thermo Fisher Scientific Company, provides chemicals and life science research reagents available in Europe through tebu-bio, including antibodies, cell culture additives, lipoproteins and cell growth factors, cAMP & cGMP antibodies....

AnaSpec

Since 1993, AnaSpec, Inc. (an Eurogentec company) is specialized in the development of peptides, antibodies, assay kits for basic research, high-throughput screening, drug discovery and assay development. They provide a broad range of catalog and custom biochemicals and reagents together with custom peptide synthesis. For customized peptide productions, please contact your tebu-bio local office.

Arbor Assays

ARBOR ASSAYS build robust immunoassay and enzyme activity kits to quantitate biomolecules in biological matrices.

Assay Biotech

Assay Biotech offer ELISA kit and 5,000+ validated antibodies that span a wide range of cell signalling pathways. This unique collection of research primary antibodies features over 1,000 phospho-specific antibodies, isoform and modification-specific antibodies, antibodies against ion channels, transmembrane proteins, receptors, G-Protein Coupled Receptors (GPCR)... Each antibody is validated using a combination of Western blot (WB), direct enzyme-linked immunosorbent assay (ELISA), immunohistochemistry (IHC), immunocytochemistry (ICC), and immunofluorescence (IF). Web site: www.assaybiotechnology.com

Bayou Biolabs

Bayou Biolabs produce highly purified but affordable enzymes, DNA ladders and pUC & M13 DNA for use in molecular biology applications.

BBI solutions

BBI Solutions (formerly British BioCell) produce of superior quality reagents for immunoassay development (including gold-colloid) in the field of diagnostics and pharma.

Bioaim Scientific Inc

BioAim Scientific Inc. is a high-tech biotech company providing fast and precise immunoassay kits. BioAim's EasyTest ELISA technology is a simple and rapid technology for the quantitation of antigen. Compared to standard format ELISA, EasyTest ELISA only needs one wash step that can decrease variations from wash and pipetting steps. The whole process takes less than 2.5 hours with high accuracy and precision. Website: www.bioaimscientific.com

BioAustralis Fine Chemicals

BioAustralis Fine Chemicals is a specialist producer of microbial metabolites and semi-synthetic analogues for in vitro laboratory use. Rare and unusual microbial metabolites

for discovery and lead molecule identification, Metabolites for research into modes of action, biological activity and structure-activity relationships, Reference standards for pharmaceutical, food safety and environmental testing, Analogue Set that bring together groups of metabolites and semi-synthetic analogues that share a common theme, Antibiotics... Website: www.bioaustralis.com

Biocolor

Biocolor Life Science supplies biochemical assay kits to measure to measure soluble and insoluble collagen, glycosaminoglycans, elastin, and glycosaminoglycans (to name a few) in cells tissues, fluids. Biocolor's product portfolio includes the dye-binding Sircol™ Collagen Assay for the detection of acid and pepsin-soluble collagens and the monitoring of collagen produced in situ or during in-vitro cell culture and in-vitro ECM formation. Sircol™ Collagen Assay kits are eligible for turnkey services, performed for you by the Project managers and Technicians at tebu-bio's own European based labs.

BioLife Solutions

BioLife Solutions manufactures proprietary protein-free, serum-free GMP biopreservation media, hypothermic storage media and cryopreservation media. As an example, CryoStor freeze Media products are designed to mitigate temperature-induced molecular cell stress responses during freezing and thawing. Web site: www.biolifesolutions.com

BioPRIM

Bioprim is a resource for a complete range of serum, plasma and PBMCs for drug discovery and research purposes isolated from Monkeys.

Biosensis

Biosensis produce antibodies and reagents for Neuroscience, particularly on Neurotrophins and Neurotrophin Receptors. Biosensis's neuroscience portfolio also includes products for research in neurodegenerative diseases, neuro-development, and neuro-metabolism (incl. Alzheimer's, Parkinson's and ALS diseases), as well as autophagy, metabolic and stress disorders, and neuroimmunology and inflammation. tebu-bio has selected Biosensis for their unique collection of IHC and IF validated primary research antibodies.

Biotime Inc

BioTime provides high quality stem cell technologies as research grade and therapeutic grade products to scientists around the world. BioTime's research products include HyStem® hydrogel matrices for tissue engineering, bioprinting, and stem cell culture applications.

Bioworld technology

Bioworld Technology produces more than 15,000 highly purified Monoclonal and

Polyclonal Antibodies and Kits for Life Science research in the field of Signal transduction & Phosphorylation studies, Cardiac markers, Neuroscience and Stem cell research. Bioworld Technology is one of the leading phospho-antibody manufacturers with over 500 phospho-antibodies for AKT, AMPK, GSK, STAT pathways. Interestingly, the peptides corresponding to each phospho-antibody are also available to make researchers' analysis easier. All of Bioworld's products are tested in their facilities and the original published pictures are displayed online together with very informative product details (applications, recommended dilutions...). Bioworld's antibodies benefit from the tebu-bio's "100% satisfaction guarantee".

BosterBio

Boster Biologicals (BosterBio) develop research primary and secondary antibodies optimized for WB, IHC, ELISA, as well as a variety of ELISA kits to detect biomarkers involved in cancer, developmental biology, neurosciences, inflammation. Their PICOKINE™ ELISA kits and PICOBAND™ antibodies reach picogram level sensitivity of your protein of interest. Discover Boster Biological validated immunological reagents in Europe through tebu-bio.

BPS Bioscience

BPS Bioscience is leading producer of recombinant enzymes (wild-type and mutants), assay kits, substrates, and services for Drug Discovery. BPS Bioscience manufactures one of the largest selections of druggable targets (Acetyltransferases, HDACs, Histone Demethylases, Histone Methyltransferases, Kinases, Peptidases, Phosphatases, Phosphodiesterases, Poly ADP Ribose Polymerases, Ubiquitin Enzymes...). Recently, assays to investigate immuno checkpoint protein interactions in relation to immunotherapy drug discovery programs have been added to the portfolio of products and services (e.g. PD-1/PD-L1/PD-L2; B7-1/CD28, B7-1/CTLA4; BLTA/HVEM, CD47/SIRP?; GITR/GITRL; CD47:SIRP?; CD137:CD137L; CD40:CD40L; TIGIT/CD226 as well as the Trp catabolism pathway (IDO and TDO)). Their expanding offer is available in Europe via tebu-bio. For advice on choosing your BPS products, get in touch with your local tebu-bio office.

BroadPharm

BroadPharm is a leading provider for high purity PEG linkers and advanced bio-labeling reagents with a strong expertise in modern chemistry and notably innovative PEG linker synthesis and new PEGylation products.

Canopy Biosciences LLC

Canopy Biosciences provides unique kits for gene editing & processing (eg CRISPR complete kits, KO cell lines and lysates) and bio-processing (eg host cell proteins (HCP) detection kits).

Cedarlane Laboratories

Cedarlane Laboratories (Cedarlane Labs) manufacture research products for cell biology, neurobiology and immunology. It included research antibodies, complement for

tissue typing, immunocolumns, and the Lympholyte® Cell Separation Media for the isolation of PBMCs and PMNs.

Celartia

Celartia is a biotechnology company manufacturing cell culture bioreactors. Celartia's system, Petaka, is an innovative and convenient labware device for cell culture, stem cell culture, tissue culture, cancer cell culture that enables the cells themselves to auto-regulate the levels of oxygen & CO₂ in the media without using any external instrumentation or apparatus.

Cell Applications

Cell Applications produce a wide range of primary cell types (eg. Adipocytes, Astrocytes, Blood Cells, Cardiomyocytes, Endothelial Cells, Epithelial Cells, Fibroblasts, Keratinocytes, Melanocytes, Microvascular Cells, Smooth Muscle Cells, Synoviocytes...), optimised growth media, supporting cell culture reagents and antibodies to serve cell-based R&D.

Cellix

We are Cellix develop and manufacture an advanced microfluidics drug screening tool for cell-based assays that uses a simulated human environment thus narrowing the gap between in vitro and in vivo. Applications include investigation of cell adhesion, migration and transmigration under physiological flow conditions (mimicked in biochips) and cell culture with a simple iPod Touch controlled microfluidic pump. Therapeutic areas include thrombosis, atherosclerosis, inflammation, stem cell research, asthma, allergies, malaria and biofilm culture.

CellResearch Corporation

CellResearch Corp. provides high quality primary cell strains, and culture media. Obtained from single donors and not pooled, cell strains are derived from multiple locations of the body. Besides the normal human skins, cell strains are derived from keloid and hypertrophic scars. For comparative research, fibroblasts isolated from normal skin adjacent to the keloid or hypertrophic scar are also available.

Cellscript

CELLSCRIPT provides the best technologies for making and using RNA for translation in cells for clinical research and therapeutics (including kits for in vitro transcription, 5' RNA capping, poly(A)-tailed mRNA for translation in cells...).

Cellular Engineering Technologies

Cellular Engineering Technologies (CET) has years of experience manufacturing stem cells and media obtained from human non-embryonic sources, such as adipose tissue,

bone marrow, Wharton's jelly, umbilical cord blood, and placentas. Tissue culture media is optimised for cell growth from the very beginning of cell purification.

Celther Polska

tebu-bio has selected Celther Polska, for its offer regarding Human primary cancer cell lines and induced pluripotent stem cells from a variety of tissue sources, including breast, colon and prostate.

CH3 BioSystems

CH3 BioSystems is a manufacturer of high-performance ingredients for discovery of protein methylation pathways in cells and tissues. CH3 BioSystems has selected tebu-bio as their European distributor to provide Life Sciences researchers with superior, innovative epigenetics tools (Methylarginin specific antibody, peptides, enzymes, complementary molecular kits, cell lines, survivin promoter luciferase reporters...).

CHI Scientific

tebu-bio has selected CHI Scientific for his proprietary reagent kits (ex. PrimaCell, FibrOut and OptiTDS) that deliver higher-quality outcomes, dramatically reducing the time and effort to perform cell/tissue culturing and creating standardized results.

Cloud-Clone corp. Wuhan

Cloud-Clone provide a large range of ELISA tests (Sandwich ELISA Kits, Double Sandwich ELISA Kits, Competitive Inhibition ELISA Kits and Instant ELISA tests for increased efficiency and fast results). Cloud-Clone are constantly developing new products all available through tebu-bio.

Cypex

Cypex produce highly characterized reagents for in vitro human drug metabolism. It covers human drug-metabolising enzymes, bacosomes CYPs (human, dog, mouse, monkey, rat,) and SULTs, purified CYPs, fine chemicals, and a range of research antibodies for ADME-Tox studies. Web site: www.cypex.co.uk

Cytoskeleton

Cytoskeleton, Inc. offers a wide range of innovative kits for drug screening, signal transduction and cytoskeletal research. These ready-to-use products, available in Europe through tebu-bio, are compatible with basic research or small screens and with a high throughput scale for large screens as well.

Detroit R&D, Inc

Detroit R&D is committed to developing innovative and reliable antibodies, ELISA kits and antibody arrays. Detroit R&D specializes in environmental health science, hypertension and breast and prostate cancers, including research on biologically active eicosanoids such as EET, DHET and 20-HETE, environmental estrogens such as BPA, prostaglandin H synthase (PGHS, also called COX), cytochromes P450 (CYPs), glutathione S-transferases (GSTs), oxidative stress, DNA damage, Xenopus, drug-metabolism, breast and prostate microarrays and wound healing. For advice on choosing your Detroit R&D products, get in touch with your local tebu-bio office in Belgium, France, Germany, Italy, the Netherlands, the UK, Spain, Portugal and Scandinavia (Denmark, Finland, Norway, Sweden).

Dojindo EU GmbH

Dojindo Laboratories produce high quality chromogenic dyes (ex. WST-5), cell membrane permeable probes (ex. MitoPeDPP), and kits (ex. Cell Counting Kit-8 - CCK-8) for Life Science research, drug discovery, cell biology, live cell imaging and mitochondrial research (ex. Si-DMA singlet oxygen imaging).

Echelon Biosciences

Echelon Biosciences provide products used studying cell signaling pathways, notably phosphoinositide phosphates for fundamental research and the development of potential drugs for cancer, diabetes, inflammation, infections, and cardiovascular disease.

Elabscience Biotech.

Elabscience are specialized in immunoassays and reagents for the life science community. They have both an R&D platform and manufacturing plant, with in house QC for every product, to ensure consistent and robust experimental results. Elabscience major products cover Proteins, Antibodies, ELISA Kits and CLIA Kits, already cited in numerous publications. Interestingly, small vialling formats are available for easy antibody testing in applications not tested in house. Contact your tebu-bio local office for further information !

EnoGene Biotech

EnoGene Biotech develops monoclonal and polyclonal research antibodies. tebu-bio has selected EnoGene Biotech for their unique collection of IHC validated primary antibodies that bring Life Scientists easy convenient and affordable tools to study cell signaling pathways.

EpiCypher, Inc.

EpiCypher offers innovative tools for Epigenetics and chromatin biology research. Histone peptide arrays for quantitative, rapid and high-throughput analysis of effector protein, antibody or enzyme interactions with a comprehensive library of histone peptides. Highly purified histone-derived peptides. Recombinant nucleosomes and histone octamers. Epigenetic enzymes, assay kits, readers, and substrates. For advice on choosing EpiCypher products, contact your tebu-bio local office.

EpigenDx

EpigenDx is a genomic and epigenomic research company. EpigenDx offer methylated genomic DNA controls, validated Bisulfite Sequencing Primers for methylation analysis together with lab services for targeted NGS Methylation and microarray analysis. Contact our tebu-bio's experts for further information. Website: www.epigenDx.com

Eurogentec

Eurogentec is a world-wide renowned manufacturer of products and services for Life Science Research and collaborate with tebu-bio for the European distribution of Eurogentec's research antibodies, cloning, PCR enzyme and MasterMixes.

Exbio

tebu-bio have selected Exbio's antibodies because of their outstanding quality and sense of innovation in the field of Flow Cytometry (FCM) and Immunohistochemistry (IHC) applications.

Focus Biomolecules

Focus Biomolecules is a small molecule-based life sciences company providing with highly characterized bioactive inhibitors, activators, agonists, antagonists and Custom organic / chemical compound library synthesis.

Full Moon Biosystems

Full Moon BioSystems provide innovative products for proteomic research with an attractive offer of research antibody arrays to monitor hundreds of proteins (biomarkers) in a single experiment. A few examples of Full Moon Biosciences's popular arrays:: Cancer Signaling Array: 269 key phospho-specific and site-specific antibodies from multiple cancer signaling pathways. Cytokine Profiling Array: 310 cytokine-related antibodies in six replicates for cytokine profiling and inflammation studies. Phospho Explorer Array: 1318 phospho-specific and site-specific antibodies for protein phosphorylation profiling. Signaling Explorer Array: 1358 pathway-specific targets covering more than 20 signaling pathways for biomarker screening and cell signaling studies. Full Moon BioSystems immunoassay kits are eligible for turnkey services, performed for you by the Project managers and Technicians at tebu-bio's own European based labs. For advice on choosing your Full Moon BioSystems' products, get in touch with your local tebu-bio office.

Funakoshi

Funakoshi Co Ltd provide innovative and convenient research reagents for cell biology, biochemistry and molecular biology in various life sciences fields.

GeneCopoeia

GeneCopoeia is the original manufacturer, seller, and service provider of a variety of

biological reagents, including genomics, proteomics, molecular and cellular biology. Their product portfolio includes clone collections for ORF cDNA, shRNA, miRNAs, promoters, CRISPR, TRE and more. GeneCopoeia also provides Genome editing products and services, such as sgRNAs and libraries, indel detection, donor vectors, Cas9 cell lines, Safe harbor kits and TALEN. GeneCopoeia has various viral delivery systems, such as Lentiviral and AAV systems, as well as, MicroRNA solutions that include precursor and inhibitor clones, 3' UTR clones, qPCR primers & arrays and qPCR kits. Additionally, they have a collection of PCR/qPCR primers, qPCR & RT-qPCR kits and arrays. Lastly, their extensive suite of kits and reagents include Luciferase reporter assays, transfection reagents, cloning systems, FISH probes and more. Combined with tebu-bio's comprehensive offer of primary antibodies, active proteins, molecular biology tools and primary cells, these unique reagents and lab services will help you boost your research programs.

Genomembrane

tebu-bio has selected GenoMembrane to provide transporter-related products and services for the development and design of novel drugs. One of the major reasons for drop-out is inappropriate ADME (Absorption, Distribution, Metabolism, and Excretion) properties of candidates, resulting in low bioavailability or toxicity. It is, therefore, important to predict such problems at as early a stage as possible in the development process. GenoMembrane provides high-quality transporter reagents for this purpose. A few examples: ABC Transporter Membranes / Vesicles Ready-to-use assays kits for ATPase assay using ABC Transporter/Membranes SLC Transporters... Website: www.genomembrane.com

Gerbu

GERBU Biotechnik GmbH offer a wide range of biochemicals, reagents, nutrient media and ingredients.

Globozymes

GloboZymes produce enzymes, signal transduction proteins and initiating factors, together with antibodies and kits for cell signaling and signal transduction studies.

Goryo Chemical Inc

Goryo Chemical creates innovative fluorescent probes for applications in cell biology with a strong focus on Live Cell Imaging stains to follow processes such as phagocytosis and endocytosis, detect Reactive Oxygen Species (ROS), or to label specific cell types (ex. iPS cells). Contact your tebu-bio local office for any further assistance regarding Goryo's fluorescent dyes.

HemaCare Corp.

tebu-bio has selected HemaCare Corporation – a global provider of biological blood products and services. HemaCare is a leader in Cell and Tissue Collection, Processing and Cell Therapy, providing the high-quality biological material derived from normal and

mobilized peripheral blood, bone marrow and cord blood needed to ensure quality research outcomes that meet the unique needs of the scientific community. For advice on choosing your HemaCare, get in touch with tebu-bio cell biologists.

HyTest Ltd.

HyTest offers innovative solutions for assay development and research applications by providing high-quality immunological reagents in such areas as cardiac markers, Troponin I and Troponin T, infectious disease antibodies and autoimmune disease reagents.

Innovative Biochips LLC

Innovative BioChips (a.k.a. iBioChips) is a biotech company that integrates cellular assays and engineering into miniaturized chips to reach cutting-edge sensitivity and high-throughput. As an example, the SMART ALIQUOTOR is a convenient, rapid, selective, and damage-free biochip for single cell isolation to be used for gene editing and clonal analysis. The 1 Million Microwell Device (1MMD) is a low-cost and highthroughput biochip ideal for single-cell RNA-sequencing.

Innovative Research

tebu-bio have selected Innovative Research as a source of human and animal biological products for in vitro studies. Established in 1998 after a realization that dependable, high-quality, and affordable research material was difficult to come by, Innovative Research now offer over 1,000 human and animal biological products, including plasma, serum, biological fluid, whole Blood, disease state plasma and serum IgG and plasma proteins...

LifeSensors

LifeSensors is the leading producer of innovative tools that facilitate the study of the Ubiquitin and Ubiquitin-like protein pathways together with the unique SUMOpro and SUMOstar technologies for prokaryotic and eukaryotic protein expression, used worldwide by academic, government, pharmaceutical, and biotechnology entities. Website: www.lifesensors.com

Lucerna Chem

Lucerna-Chem AG's Prothermal is a concentrate for the maintenance of the water quality in thermostats and waterbaths available at tebu-bio.com.

Marker Gene Technologies

Marker Gene technologies, Inc. (MGT) provide robust fluorescent and luminescent reagents ideal for detecting and monitoring biological cellular functions (apoptosis/senescence, viability/toxicity, pH sensors, cell metabolism, oxydative stress, Calcium indicators ...) or cell structures and organelles (lysosomes, cell membranes, mitochondria...).

Mawi DNA Technologies LLC

Mawi DNA Technologies has overcome the problems of low recovery, sheared DNA, and resampling costs common to most current non-invasive sample collection methods. The innovative design of the iSWAB collection device allows the release of cells captured from any swab into a proprietary lysis and stabilizing buffer for robust and convenient collection of DNA, RNA or protein samples.

Meridian Life Science

Meridian Life Science, Inc. (MLS) is a leading large scale manufacturer of antibodies, proteins, viral antigens and proteins with over 30 years experience.

Microsurfaces

Microsurfaces is a startup company located in Melbourne (Australia) that manufactures novel microstructured surfaces for live cell imaging over long periods of time with single cell resolution for high content imaging and tracking, drug discovery and screening applications.

Montana Molecular

Montana Molecular develops genetically encoded fluorescent biosensors and probes for cell-based assays and live cell imaging to conveniently assess intracellular parameters (ex. cAMP, DAG, PIP2, Ca²⁺, and voltage...). Montana Molecular technology is based on BacMam vectors used as an efficient vehicle to optimally deliver and express genes in mammalian cells for Robust Assays in Living Cells: Easy assay steps – No cell lysis Fluorescence imaging or plate reader detection ($Z' > 0.8$) Physiologically-relevant and cell friendly No forskolin or IBMX needed No enzymes or co-factors Multiplex GPCR Assays: Gs, Gq, Gi, Voltage For advice on choosing your Montana Molecular' biosensor, get in touch with your local tebu-bio office.

Nanocs

Nanocs Inc. produce a broad portfolio of reactive molecules for fluorescence labeling, PEGylation, biotinylation and bioconjugation together with functionalized biopolymers, nanoparticles, labeled proteins, antibodies, enzymes, and peptides.

NanoSurface Biomedical, Inc.

NanoSurface Biomedical Inc. develop nanopattern substrates, printed at the bottom of sterile cell culture dishes, which provide a topographical and mechanical niche for cells to grow as if they are in vivo. By mimicking the extracellular environment, this unique Anisotropically NanoFabricated Substratum (ANFS) technology promotes the in vivo-like maturation and alignment of in vitro cell cultures. The NanoSurface Biomedical's nanopatterned cultureware has been already validated on various cell types such as cardiomyocytes, muscle cells, endothelial cells, iPS cells, mesenchymal stem cells, fibroblasts (to name a few) in in vitro cell cultures.

Osenses

Osenses is THE sensory neuron specialist. tebu-bio have selected Osenses because of their outstanding quality and sense of innovation in the field of Chemosensory Receptors, Autophagy, Ion Channels and Vesicle Transporters. 100% guaranteed for their respective applications, you can select and buy these unique research antibodies and peptides by contacting your local tebu-bio office in Belgium, France, Germany, Italy, the Netherlands, the UK, Spain, Portugal and Scandinavia (Denmark, Finland, Norway, Sweden).

PBL Assay Science

PBL Assay Science (formerly PBL InterferonSource) is the world's largest source of interferon (IFN) subtypes, high quality cytokines, monoclonal and polyclonal antibodies and assay kits for life science researchers.

Peprotech

PeproTech was established in 1988 by a group of scientists who decided to focus their efforts on the development and production of recombinant cytokines for Life Science research. Today, PeproTech is a world leader in supplying high quality Cytokines & Growth Factors, but also antibodies, ELISA kits.

Percipio Biosciences

Percipio Biosciences bring research tools that target biomarkers of Oxidative Stress with the OxisResearch® and Bioxytech® kits. These assays make the testing of Oxidative, Antioxidant, Nitrosative and Inflammatory Biomarkers more biologically relevant and simple.

Phenocell sas

Phenocell is a French biotech company that generate human healthy or pathological in vitro cellular models derived from stem cells for research and drug discovery applications. Based on the Nobel-prize winning technology of stem cell research engineering and reprogramming, Phenocell provide foot-print free and feeder-free human iPS cells that are further differentiated into Sebocytes, Melanocytes and Keratinocytes and Retinal pigmented epithelium cells for cell-based assays.

Platypus Technologies

Platypus Technologies develops innovative cell-based tools to study adherent cell migration without cell culture inserts: Oris™ and Oris™ Pro Cell Migration Assays. These assays generate more data from cell migration and invasion assays used to study cancer metastases and regenerative medicine. They are ideal alternative to the scratch assay.

Polysciences Europe

Polysciences, Inc. manufactures specialty and fine chemicals, microspheres, monomers, polymers, microscopy, histology, biotechnology, and specialty products for Life Scientists.

Primorigen Biosciences

Primorigen helps researchers in Stem Cell research by providing innovative solutions for stem cell maintenance, proliferation, differentiation and large scale production. Web site: www.primorigen.com

Prodo Laboratories

Prodo Laboratories (Prodo Labs) provide Life Scientists high quality human islets and cell culture complement (incl. PIM(S)® islet specific media) for research in the development of new drugs for diabetes or in the development of new insulin-producing cells for future transplants. Looking for Human Islet Cells from Prodo Labs? Get in touch with your local tebu-bio office.

ProSpec-Tany TechnoGene

ProSpec (Protein-Specialists) is specialized in production of highly purified bacterial-derived proteins to serve the research community with rec. proteins for cancer, apoptosis, development, endocrinology, immunology, neuroscience, proteases, and stem cell research.

ProteinOne

ProteinOne produce high quality active rec. proteins and enzymes such as HCV- & HIV- Proteases, Transcription Factors, Nuclear Receptors, Splicing Factor Proteins and Kinases.

Puracyp

PURACYP, Inc. offers easy-to-use kits to assess nuclear receptor activation and P450 enzyme induction for ADME-Tox. Their cell-based kits contain everything needed for assessing gene transcription (CAR, AhR, PXR) and for determining induction of drug metabolizing enzymes (CYP2B6, CYP1A2, CYP3A4, NCEs, P450 enzymes), and transporters by NCEs. Results obtained with Puracyp's Receptor Activation Assay kits are highly reproducible and lack the variability inherent to other methodology. Little effort is required to perform the tests and the entire experiment is completed in 2 days with a total of 3-6 hours research time.

Qualyst Transporter Solutions

Qualyst Transporter Solutions provide an integrated in vitro cellular model (B-CLEAR® technology) maintaining physiologic cellular components and processes at in vivo relevant amounts for accurate hepatic drug transporter (uptake and efflux) and drug

metabolizing enzyme (Phase I and II) analysis.

Quansys Biosciences

Quansys Q-Plex™ Arrays accurately quantify biomarkers (analytes) from precious samples in a fast and cost effective way. Quansysbio multiplex ELISA-based testing (Q-Plex technology), is a fully quantitative multiplex ELISA-based assay where up to 25 distinct capture primary antibodies have been loaded to each well of a 96-well plate in a defined array. Quansys Q-Plex™ Arrays kits and appropriate imaging systems are available in Europe through tebu-bio and are eligible for turnkey services, performed for you by the Project managers and Technicians at tebu-bio's own European based labs. To help you choose your Quansys Bio Q-Plex multiplex ELISA, get in touch with your local tebu-bio office.

Raybiotech

RayBiotech, Inc. develop cutting edge proteomics tools for the advancement of basic and clinical research, and the facilitation of drug and biomarker discovery. RayBio's product-line covers: 2,000+ rigorously tested ELISA kits covered by a 90-day 100% satisfaction guarantee (risks and no worries) Multiplex ELISA Array (Quantibody®) Membrane- or glass-slide Antibody Arrays (C-Series, G-Series, L-Series, E-Series) Functional assays Research antibodies Recombinant proteins RayBiotech have endorsed tebu-bio as their European "RayBiotech Certified Array Service Provider" for testing samples with RayBiotech's products so that you just send us your samples and we perform for you the immunoassays at tebu-bio's own European based labs.

ReproCELL

ReproCELL offer media and reagents specifically developed to provide superior results in human ES and iPS culture (hES/iPSC). Developed by pioneering stem cell scientists, ReproCELL's media was used to maintain the world's first human iPS cells (Cell 131, 1-12). ReproCELL's strength lies not only in its technologies for maintaining ES/iPS cells, but also in its ability to generate functional human cells out of ES/iPS cells: functional Human iPS Cells Derived Cardiomyocytes, hiPSC-Neurons, hiPSC-Hepatocytes...

ReproCell Europe

Reprocell Europe (previously Reinnervate) is a market leading company in 3D cell culture. The Alvetex® family of 3D cell culture products provide a flexible platform that allows scientists in any life science laboratory to quickly and easily establish better in vitro assays and models that better mimic the in vivo growth of cells.

Rockland

Rockland Immunochemicals Inc. produce antibodies and immunoassays suited to study protein post-translational modifications (PTMs), Epigenetics (Epi-Plus® antibodies) Apoptosis / Cell Cycle, Cytokines, ECM, Transcription Factors, and cell signaling (AKT, ATM, NFkB pathways...). Secondary antibodies (ATTO dye-, HRP-, Dylight™ -conjugated or un conjugated) secondary antibodies and TrueBlot® reagents (to

generate clear, best-quality data in individual IP/WB) complete their offer.

San Diego Blood Bank

San Diego Blood Bank's Clearsate is a human source of platelet-derived growth factors and is an alternative to fetal bovine serum (FBS), and AB serum. Clearsate is cleared of extracellular plasma proteins and antibodies, and is manufactured under cGMP process in an FDA regulated production laboratory. While non-human growth supplements are at risk of introducing viruses and proteins of animal origin that can trigger immune and allergic reactions, platelets used for production of Clearsate are fully tested for HBV, HIV 1&2, HCV, HTLV I/II, syphilis, red cell antibodies, West Nile Virus and bacterial contamination.

Sanbio Monosan

Sanbio B.V. offers Life Scientists one of the latest developments in products and services for biological research and diagnostic testing including the popular MONOSAN antibodies.

Sanguine Biosciences

Sanguine Biosciences is a biorepository that provide high quality Human biospecimen and primary cells (e.g., PBMC and subpopulations from healthy and patient donors) for the purposes of basic research, biomedical research and drug & biomarker development.

SciKon Innovation, Inc.

tebu-bio has selected SciFlow™ 1000 System from SciKon Innovations, a cascading flow and multi-organ device. The device advances nutrient transport for 'cells-in-system' approaches, and was designed to retain traditional culture configurations while advancing fluid distributions with grafted flow paths. This affords users the option to evaluate networked –cell, -tissue, and -environment relationships.

Sekisui Xenotech, LCC

SEKISUI - XenoTech is the leading provider of in vitro drug metabolism, Drug-Drug Interaction (DDI) studies and in evaluating drug candidates as substrates, inhibitors and inducers of drug-metabolizing enzymes (enzyme Inhibition or Induction, Drug Metabolism, Drug Transport and Analytical Services...). Xenotech deliver information recommended by the U.S. Food and Drug Administration (FDA) and European Medicines Agency (EMA) to predict inter-individual variation in safety and drug efficacy and to explain Adverse Drug Reactions (ADR): CYP / UGT Enzyme Inhibition, in vitro Enzyme Induction, ex vivo Enzyme Induction, Drug Transporters, Reaction Phenotyping, Metabolite ID, Species Comparison, Metabolic Stability, Covalent / Protein Binding, Analytical Services (Bioanalysis)... Web site: www.xenotech.com Xenotech has appointed tebu-bio for many years as their unique distributor in Europe to assist Life Scientists in ADME-Tox studies. For advice on choosing your Xenotech's products, get in touch with your local tebu-bio office.

SignaGen Laboratories

SignaGen develops and manufactures gene delivery tools and transfection reagents for research by bringing efficient and cost effective chemical and viral tools for in vitro and in vivo gene delivery. Their solutions bring answers to all eukaryotes cell projects including protein production, gene knockdown and overexpression.

Smartox Biotechnology

Smartox Biotechnology* is specialized in synthetic peptide toxins issued from venomous animals which are ideal tools for studying ion channels and for drug discovery research programs. Access the Smartox library of bioactive venomous synthetic toxins by contacting your local tebu-bio office. *Smartox Biotechnology = Smartox (Spécialiste mondial de la fabrication de toxines peptidiques d'animaux vénimeux)

Solvo Biotechnology

Solvo Biotechnology is a leading worldwide provider of drug transporter and drug-drug interaction assays with ready-to-use assay kits (e.g., ATPase and Vesicular Transport assays, Vesicular Transport Kits (PREDIVAZ™), ATPase Assay Kits & Controls (PREDEASY™) ...) that comply with FDA and EMA Guidances.

Spirochrome AG

tebu-bio has selected Spirochrome for their new class of far-red, cell permeable, fluorogenic, photostable, and superresolution compatible probes for live cell imaging: SiR probes. The SiR fluorophore derivatives permit fine imaging of the cytoskeleton (actin, tubulin) and DNA in living cells with unprecedented resolution. Website: www.spirochrome.com

StemCultures

tebu-bio has selected StemCultures' StemBeads® FGF2, EGF, Activin-A, BDNF and GDNF revolutionary growth factor supplements that offer a more efficient way to grow stem cell cultures. These Stem Beads are licensed from research labs at the Neural Stem Cell Institute (NSCI).

Stemgent

Stemgent design research tools dedicated to cellular reprogramming and stem cell research. It covers assay kits and small molecules (incl. Stemolecule™) for generating iPS cells as well as cell lines, media, and antibodies (incl. Stemgent™ StainAlive™ antibody product-line) to characterized cell differentiation.

Surmodics

SurModics portfolio of BioFX® colorimetric and chemiluminescent substrates offers the stability, low background and sensitivity needed to meet the demands of researchers who are performing immunoassays like ELISA, Western Blot, ELISpot and

Immunohistochemistry applications.

SynVivo Inc

SynVivo provide physiological, cell-based microfluidic chips bringing a morphologically and biologically realistic microenvironment. SynVivo's chips enable the analysis of cellular / tissular behavior in real-time for drug delivery and drug discovery applications. These fully customizable chips support a microvascular in vitro network simulating the circulation inside any tissue (flow, shear and pressure).

Target Mol

Target Molecule Corp. (Target Mol) is specialized in offering a huge variety of chemical compounds such as inhibitors, activators and reference compounds. Furthermore, Target Mol is offering a number of compound libraries (e.g. Approved Drug library, Anti-Cancer library, Apoptosis Compound library and many more). Target Mol's compound portfolio is expanding every month. Stay tuned regarding new developments by visiting tebu-bio.com regularly.

Tataa Biocenter

TATAA Biocenter is a leading provider of gene expression profiling and quantitative real-time PCR (qPCR) research products.

TheWell Bioscience

TheWell Bioscience is a biotech developing innovative cell culture & delivery systems that bridge the in vitro and in vivo studies with simple, versatile products to obtain more physiologically relevant experimental data. As an example, TheWell Bioscience has recently released an animal origin-free hydrogel system: VitroGel 3D. Closely mimicking the natural extracellular matrix environment, VitroGel 3D a ready-to-use tunable hydrogel for 3D cell culture and beyond, with a simple experimental procedure at room temperature. Web site: www.thewellbio.com

Time Bioscience

Time Bioscience manufacture in vitro assay tools focusing on the Wnt/beta-catenin cell signaling pathway for drug discovery. Time Bioscience's focus lays on highly active proteins involved in this pathway like Wnt variants, Wnt signaling inhibitors, and Wnt signaling receptors, as well as reporter cell lines and their control cell lines.

TriLink Biotechnologies

TriLink Biotechnologies (a Maravai LifeSciences company) design and synthesize high quality nucleic acid and mRNA products for numerous research applications and drug discovery (ex. Cas9 genome editing, Next-Generation sequencing (NGS) of small RNA (incl. miRNA, tRNA...), Protein expression & replacement, RNA delivery...). In Europe, tebu-bio commercialize TriLink's unique nucleic acid chemistry (ex. modified NTPs & oligonucleotides, DNA & RNA synthesis tools such as CleanAmp, ARCA, CleanCap

5-methoxyuridine (5mU) together with their new technology for covalent biomolecule labelling (ChromaLink), conjugation & biotin capture (MagnaLink, NanoLink). Website: www.trilinkbiotech.com

Wuhan Fine Biological Technology Co.,Ltd

Fine Test Biotech is an ISO9001:2008 Certified Company, offering a full line of quality research kits, which include ELISA Kits, related ELISA assistant reagents and more high quality antibodies, recombinant proteins.

XCell Science Inc.

XCell Science Inc. (XCell) provides the Life Sciences community with pluripotent Stem cell-based cellular models engineered with the gene editing ZFN and TALEN technologies. Xcell offers a unique set of Human Pluripotent Stem Cells-derived neural cells such as ready-to-use neurons, dopaminergic neurons, astrocytes and other neural derivatives mimicking diseases for drug discovery and toxicology purposes. For advice on choosing your XCell products, get in touch with tebu-bio cell biologists.

Xylyx Bio

Xylyx Bio is a US biotech company specializing in cell-specific extracellular matrix biomaterials to bring native cellular microenvironment and tissue-specific extracellular matrix for more physiologically relevant in vitro cell-based assays in drug discovery and tissue regeneration. Xylyx has chosen tebu-bio for the distribution of their NativeCoat™ 2D ECM SURFACE COATINGS, TissueSpec® 3D ECM HYDROGELS and 3D ECM SCAFFOLDS in Europe.

Zen-Bio

Zen Bio (Zen-Bio) provides human adipocytes, preadipocytes, adipocyte cell extracts, assay services, and research kits to better understand human obesity, diabetes, and cardiovascular disease.
